

## **PSV 715**

# HIGH PERFORMANCE SYNTHETIC LUBRICATION PASTE

smartGLEIT PSV 715 is a homogenous, light coloured lubrication paste, based on lithium-complex-soap, synthetic oil and a high content of triboreactive, microWHITE solid lubricants.

#### **Product Features**

smartGLEIT PSV 715 is based on an innovative combination of novel, microWHITE solid lubricants. When energy (load and relative movement) is supplied to the friction contact, the solids form a reaction layer with extraordinary high wear resistance — especially effective under mixed and boundary friction conditions as well as oscillationand vibration loads.

The solid lubricants are not subject of hazard labelling according CLP- or GHS-regulations.

- Novel, microWHITE solid lubricants:
  - Fast build-up of a stable, wear-resistant, tribochemical layer
  - Particularly high protection level against fretting corrosion the new benchmark
  - Extraordinary high load carrying capacity
- Extended service temperature range:
  - 40°C to -130°C
- Plastic friendly base oil
- Universally applicable for
  - assembly,
  - running-in,
  - permanent lubrication and
  - as screw paste.
- Suitable as well for copper alloys (e.g. bronze, LHG-1013).
- Additional pretreatments like phosphating, gas nitriding etc. will enhance the performance level
- Modern formulation no hazard labels required.

#### **Applications - Examples**

- smartGLEIT PSV 715 is used for initial lubrication of machine elements, which are exposed to high pressures, shock loads, vibrations or oscillations with small strokes.
- Static or kinetic fretting wear (tribocorrosion, fretting corrosion) will be prevented or significantly reduced. Fretting of the friction partners will be avoided and the running-in phase shortens significantly.
- Typical Applications:
  - Sliding guides, adjusting wedges, sliding sleeves, hinges, joints
  - Connection elements like screws, nuts, rivets, bolts
  - Shrink fit connections
  - Keyed Connections (e.g. splined shafts, keyways)
  - Adjusting mechanisms (spindles, disc-cam mechanisms)
  - Bearings of machine beds, clamping elements
  - Ejectors
  - Rack-and-pinion gears, gearings
  - Leaf-, cup-, annular- and helical-springs
  - In general as substitute for black pastes (MoS<sub>2</sub>, graphite)

#### • Note:

 Before using the product in serial/practical applications, customer's tests to ensure that the product is meeting all requirements for the intended end use, have to be performed.

#### **Instructions For Use**

- smartGLEIT PSV 715 can be applied by means of grease guns, automatic dosing equipment (suited for pasty products with solids content) and also manually by spatula, lint-free cloth, brushes or the like.
- Clean surfaces before application do not mix with other lubricants.

### **Typical Properties – smartGLEIT PSV 715**

TEST/FEATURE	STANDARD/PA- RAMETER	UNIT	PSV 715
Colour		_	white/creme
Base Oil		_	synthetic oil
Viscosity @ 40 °C / 104 °F	DIN 51805	mm²/s	100
Thickener		_	Li-complex-soap
Service Temperature		° C/°F	-40 to 130/ -40 to 266
Solids Content		%	50
Density	DIN 51757	g/cm³	1.3
NLGI Class	DIN 51818	_	1 - 2
Brugger - Value	DIN 51347	MPa	> 350
FBM Load	DIN 51350	N	8000
